

Break through for the KDV-Technology – In Hoyerswerda we present the first DEKRA-certificated and with an official permission assembled KDV-unit in Europe

In the last 6 month we succeeded together with the strong assistance of the Alphakat GmbH an elementary break through for the acceptance of the KDV-Technology. At once you can visit the first DEKRA-certificated KDV-unit in Hoyerswerda. After agreement the unit is available for test runs and visited tours for interested parties and clients. The certification proves the sustainable standing of the KDV-Technology.

Especially for the new KDV-Technology has such a certification an enormous importance to built up and increase the faith of the clients in the technology and to make the sales easier for the partners of the Alphakat GmbH.

For that we want to thank especially Dr. Christian Koch and Uwe Feller for the necessary know-how and for their active and faithful assistance.

Furthermore is the first official permission of a KDV-unit a fundamental success. The close cooperation with the regional environmental agency and building authority made it possible to create a reference-location for other KDV-locations in Germany.

These are very good conditions for our common aim to bring the KDV-Technology to worldwide success.

According to our motto: "Definitely: Stability for the future!" we are looking forward to a good cooperation and are available for your questions and with our assistance.
